|  | Term 1 | Term 2 | Term 3 |
| :---: | :---: | :---: | :---: |
| Unit Title | - Algorithms <br> - Networks <br> - Matrices \& Transformations <br> - Matrices \& their Inverses <br> - Introduction to Complex Numbers <br> - Complex Numbers \& Geometry <br> - Bivariate Data <br> - Regression Lines | - Critical Path Analysis <br> - Linear Programming <br> - Regression Lines Continued <br> - Discrete Random Variables <br> - Discrete Probability Distributions <br> - Chi-Squared Tests <br> - Roots of Polynomials <br> - Vectors \& 3D Space <br> - Sequences \& Series | - Revision for AS Mock Exams <br> - AS Mock Exams: <br> Core Pure (1hr 15mins) <br> Statistics a (1 hr 15mins) <br> Modelling with Algorithms (1hr 15mins) <br> Year 13 Course: <br> - Vectors 1 <br> - Vectors 2 <br> - Matrices |
| Approximate Number of Lessons | 28 Double Lessons | 27 Double Lessons | 22 Double Lessons |
| Curriculum Content | - Learn what an algorithm and be apply these in a variety of forms. Find out how to analyse the complexity of given algorithms. Learn and be able to apply sorting algorithms. <br> - An introduction to graph theory and modelling with graphs \& networks. <br> - Learn what a matrix is and how these can be used to transform shapes. <br> - Learn how to find determinants and inverses of $2 \times 2$ matrices and $3 \times 3$ (only using a calculator). Applying these to solve linear simultaneous equations. <br> - Learn what a complex number is and be able to $+/-/ x$ and $\div$ complex numbers. Solve all polynomial | - Learn how to use critical path analysis to interpret outcomes and analyse float, resourcing \& scheduling. <br> - Learn how to use linear programming to solve discrete problems. Use of graphs, the Simplex method and reformulating network problems as LPs. <br> - Learn how to find and use appropriate regression lines to solve problems. <br> - Interpret probability functions given algebraically or in tables. Calculate $\mathrm{E}(\mathrm{X})$ and $\operatorname{Var}(\mathrm{X})$ and learn how to find combinations of random variables. <br> - Learn how to recognise Binomial, Poisson, Uniform and Geometric distributions. Calculate probabilities, expected values and variances. <br> - Learn how to do chi-squared tests for contingency tables and association and for goodness of fit tests. | - Revision of all work covered this academic year. <br> - Vector equations of lines in 2 and 3D. Finding points of intersections between lines and planes if applicable and interpreting geometrically. <br> - Learning how to find a vector product and using this to find distances. <br> - Learn how to find the determinant and inverse of a $3 \times 3$ matrix without a calculator. Solving simultaneous linear equations with 3 unknowns using matrices. |

|  | equations finding real and complex roots. Illustrate roots on an Argand diagram. <br> - Learn how to write complex numbers in modulus-argument form and $\mathrm{x} / \div$ numbers in this form. Learn how to draw loci of given constraints in the complex plane. <br> - Learn how to find Pearson's product moment correlation coefficient and Spearman's rank correlation coefficient \& know how to identify which is more appropriate. Use of hypotheses tests for identifying correlation. <br> - Finding and using regression lines. | - Learn the relationships between roots and coefficients of quadratic, cubic \& quartic equations. Form new equations whose roots are related (linear) to the roots of a given equation. <br> - Learn how to find the scalar product of two vectors and use this to find angles. Find the equation of a plane and angle between two planes. <br> - Learn the use of standard series and the method of differences to find sums of series. Proof by induction. |  |
| :---: | :---: | :---: | :---: |
| Links to prior learning | - Basic algebra. <br> - No prior knowledge required. <br> - GCSE transformations and good algebraic skills. <br> - Should be confident with previous matrices work and be able to solve linear simultaneous equations. <br> - Use of the quadratic formula to solve a quadratic equation. <br> - Be confident working with complex numbers. <br> - Familiar with scatter diagrams and the idea of correlation (introduced in AS Maths). | - Networks \& graphs from previous term. <br> - Plot straight line graphs, form inequalities and solve linear simultaneous equations. <br> - Regression lines from last half term. <br> - Understand what a probability distribution is and how to find the mean and variance of a data set from AS Maths. <br> - Binomial Distribution from AS Maths. <br> - Happy with carrying out hypothesis tests. <br> - Understand roots of polynomials and factor theorem from AS maths and complex roots from the first term. <br> - Vectors from AS Maths. Matrices from term 1. | - Previous 2 terms work. <br> - Vectors from AS and a-Level Maths and AS Further Maths. <br> - Vectors covered so far iin Maths and Further Maths. <br> - Determinant \& inverse of a $2 \times 2$ matrix. Know the ways in which 3 planes can intersect in 3D space. |

|  |  | - Sequences from GCSE and nth terms. |  |
| :---: | :---: | :---: | :---: |
| Cultural Capital Opportunities | - Visit Bletchley Park <br> - Film: The Imitation Game <br> - Book: Things to Make and Do in the Fourth Dimension by Matt Parker. (Mrs Smith has a copy you can borrow). | - Book: The Man Who Knew Infinity by Robert Kanigel. <br> - Film: The Man Who Knew Infinity <br> - Videos: Numberphile Best Videos | - AMSP Podcasts: FMSP Podcasts |
| Assessment Focus | - Private Study: Topic quiz/tests <br> - Chapter Assessments | - Private Study: Topic quiz/tests <br> - Chapter Assessments | - Private Study: Topic quiz/tests <br> - Chapter Assessments <br> - Mock Exams |
